

WHEEL BUILDS

The online wheel shop that knows exactly what fits.

A turnkey, fitment-aware e-commerce platform built for independent wheel & tire shops — plus the digital marketing to drive traffic to it.

PREPARED FOR

PRESENTED BY

Your customers are already shopping online. Right now, they can't find you.

The independent wheel & tire shop is one of the last great local businesses without a real storefront on the internet. Walk-ins and the phone still pay the bills — but the buying journey has moved online, and that's where the sale is being won or lost before a customer ever calls.

"Will it fit?"

The single biggest question — and the #1 reason wheel buyers hesitate, call, or return the wrong order. Today your staff answers it one phone call at a time.

A 20-mile world

Without a store online, your market is whoever drives past. The national players capture everyone who searches first — including your neighbors.

A catalog you can't show

You have distributor access to tens of thousands of wheels. None of it is browsable, searchable, or sellable online.

THE SHIFT

Wheel buyers research fit, finish, and price online — then buy from whoever made that easy.

Wheel Builds makes your shop that destination: a fast, modern store that answers "will it fit my car?" automatically, shows your full catalog, and takes the order — 24 hours a day, from anywhere.

A complete online wheel shop, built and run for you.

Wheel Builds is not a template or a do-it-yourself website builder. It's a purpose-built commerce platform engineered specifically for the wheel & tire trade — combining a premium online store, an automatic catalog that maintains itself, and a fitment engine that answers the one question every customer asks.

You keep doing what you do best — wheels, tires, installs, and service. We deliver the storefront, wire it to your inventory and your distributor catalog, keep it fast and current, and drive qualified buyers to it.

Fitment-first

Enter a vehicle, see only the wheels that physically fit it. No guesswork, no wrong orders.

Self-running catalog

Your stock plus thousands of drop-ship wheels, priced and counted, refreshed automatically.

Built to convert

Fast, mobile, searchable, and tuned for high-intent buyers — then fed by digital marketing.

Under the hood: Wheel Builds runs on the same enterprise-grade commerce engine (MedusaJS) and modern web framework (Next.js) used by serious online retailers — not a hobbyist page builder. You get the speed, reliability, and room to grow of a custom platform, without the custom price tag.

Everything a modern online store needs — included.

A full commerce foundation, configured for your shop and ready to sell from day one.

Premium storefront

A fast, mobile-first online store with your branding — product pages, galleries, and a clean buying experience customers trust.

Secure checkout & payments

Integrated card payments (Stripe) with a smooth, modern checkout. PCI handled, no sensitive data on your servers.

Customer accounts

Shoppers create accounts, track orders, save addresses, and keep their saved vehicles — building a customer list you own.

Automated order emails

Branded order confirmations and notifications sent automatically — every order acknowledged instantly, no manual work.

Admin dashboard

One control panel for products, orders, customers, and inventory — manage the whole store from your phone or laptop.

Image & media hosting

Product photography and brand imagery hosted and served fast, with vendor catalog images pulled in automatically.

Mobile & SEO-ready

Built to load fast and rank well — the foundation Google rewards and the experience phone shoppers expect.

Multi-region capable

Ready to sell across regions and currencies as you grow — from one zip code to nationwide shipping.

This is the table stakes. Every line above is what a generic web shop gives you. The next three pages are what makes Wheel Builds different — and why it sells wheels the others can't.

"Will it fit my car?" — answered automatically.

A shopper picks their Year, Make, Model and trim once. Wheel Builds looks up that exact vehicle's wheel specification and instantly filters the entire catalog down to **only the wheels that physically fit it** — bolt pattern, hub bore, diameter, width, and offset all checked for them.

STEP 1

Pick your vehicle

Year → Make → Model
→ Trim, in a few taps.

STEP 2

We resolve the spec

The vehicle's exact wheel fitment is looked up live.

STEP 3

Catalog filters itself

Only fitting wheels show, each with a **FITS** badge.

STEP 4

Buy with confidence

Each product page confirms the fit for their vehicle.

The "Garage"

Customers save every vehicle they own — the daily driver, the project truck, the spouse's SUV. The store remembers them across visits and devices, so every return trip is one tap to "show what fits my truck." It works even before they log in, then follows them into their account.

Fit confirmed on every page

On a product page, the active vehicle gets a clear verdict — fits or doesn't, and why. A wheel that can't physically seat is flagged honestly, before it's ever ordered. That precision is what kills returns and builds trust.

WHY THIS MATTERS

Wrong-fit is the most common reason wheels get returned — and the most common reason buyers don't pull the trigger.

Wheel Builds removes that doubt for every shopper, 24/7, without tying up your phone. Fewer returns, fewer wrong orders, more completed sales — and a buying experience the national chains charge millions to build.

Sell your stock — and thousands more you never have to carry.

Wheel Builds runs a **hybrid catalog**: the wheels you stock in-house sit right alongside thousands of drop-ship models pulled straight from your distributor. Customers see one seamless store; you decide what you hold and what ships direct.

Your in-stock brands

The wheels you carry are featured with live, accurate stock counts — so what's on your floor is what's for sale online, always in sync.

~42,000 drop-ship SKUs

Your distributor's full wheel catalog becomes browsable and buyable — with zero inventory to purchase, store, or risk. Capture the margin, ship direct.

HOW IT STAYS CURRENT

AUTOMATIC

Pulls the feed

Connects to the distributor every 12 hours.

SMART

Detects changes

Only new, changed, or discontinued items are touched.

ACCURATE

Updates prices & stock

Per-warehouse counts and pricing refreshed.

HANDS-OFF

You do nothing

No spreadsheets, no manual data entry, ever.

No human could keep this catalog current by hand. Tens of thousands of wheels, each with sizes, finishes, prices, and stock that change constantly. Wheel Builds does it automatically — new models appear, discontinued ones drop off, prices and availability stay honest. Your store is never stale and never out of date.

Find the right wheel in seconds, not scrolls.

A catalog this big is only valuable if customers can navigate it instantly. Wheel Builds ships with lightning-fast, search-as-you-type discovery built specifically around how people shop for wheels.

Instant faceted search

Filter by brand, diameter, bolt pattern, finish, and price — with live result counts that update as fast as a customer can tap.

Smart, forgiving search

Type a brand, a size, or a model and get relevant results immediately — the kind of speed shoppers expect from the best online stores.

A homepage that sells

"New this week," "Shop by style," and "Trusted brands" sections — all driven by your real, live catalog, never placeholder filler.

Stacks with fitment

Every filter works on top of the vehicle fitment, so a shopper can narrow to "20-inch bronze wheels that fit my F-150" in three taps.

THE COMBINED EFFECT

Fitment + instant search turns an overwhelming catalog into a personal shortlist.

The customer feels like the store was built for their exact vehicle and taste. That's the experience that converts browsers into buyers — and the reason they come back.

What this looks like for your shop.

1

The confident first-time buyer

A customer with a 2021 F-150 picks her truck, browses only wheels that fit, and sees the FITS badge on every option. She orders a set at 11pm without a single phone call. **No wrong order. No return. A sale you'd have missed while closed.**

2

The overnight drop-ship order

You wake up to an order for a wheel you've never stocked. It ships directly from the distributor to the customer. **You captured the margin with zero inventory tied up and zero handling.**

3

Your market goes national

A Silverado owner three states away finds you through a "20-inch wheels for Silverado" search ad, lands on a page that proves the fit, and checks out. **Your reach expands from a drive radius to the whole country.**

4

The returning garage customer

A repeat customer's saved garage already holds his Jeep and his wife's Outback. One tap shows fresh arrivals that fit each. **A built-in reason to come back — and a list you can market to.**

5

Day-one full catalog

You launch with tens of thousands of wheels live and searchable — your stock plus the distributor's — every one with correct sizing and fitment. **A catalog that would take months to build by hand, ready on launch day.**

Made for the independent wheel & tire shop.

Wheel Builds is designed first and foremost for the established local shop that has the product knowledge, the distributor relationships, and the customer trust — but no real way to sell online.

Primary fit

Independent brick-and-mortar wheel, tire, and custom-rim shops with strong walk-in and phone business, distributor accounts, and either no website or a stale one that can't take an order. If "will it fit?" is a question your team answers all day, this is built for you.

GROWS WITH YOU

Performance & off-road

Lifted trucks, off-road, and UTV/powersports specialists where fitment precision matters most.

Multi-location shops

Regional operators who want one unified online catalog across every store.

Broader aftermarket

Shops expanding from wheels into tires and adjacent parts, with fitment as the anchor.

THE COMMON THREAD

You already have the customers and the catalog. What you don't have is the storefront that turns online interest into orders.

That's the exact gap Wheel Builds fills.

What it actually does for the business.

WHAT WHEEL BUILDS GIVES YOU	WHAT THAT MEANS FOR THE BOTTOM LINE
A 24/7 sales channel	Orders come in while you're closed, asleep, or with another customer. Your busiest hours stop being your only selling hours.
Reach beyond the drive radius	Sell to buyers across the region and the country — not just whoever passes the shop.
Sell without stocking	Thousands of drop-ship wheels earn margin with no inventory cash tied up and no shelf space used.
Fewer returns & wrong orders	The fitment engine prevents the costly mistakes that eat profit and time on every wrong-fit sale.
Time back for your team	The store answers "will it fit?" so the phone is freed for installs, service, and high-value calls.
A catalog that maintains itself	No staff hours spent on data entry, pricing updates, or pulling discontinued items — it's automatic.
Customer data you own	Accounts, saved garages, and order history are yours — a marketing asset, not a marketplace's.
A real, owned asset	A built-for-you platform you own outright — not rent forever — that grows in value as your store grows.

A great store is only half of it. We bring the buyers.

Beyond building the platform, we run the digital marketing that fills it — all of it tied directly to your fitment catalog, so ad spend lands on pages that actually convert.

Local & Fitment SEO

- Rank for "wheel shop near me," your city + brand searches, and your Google Business Profile.
- Capture high-intent "wheels for [vehicle]" searches — exactly the long-tail your fitment data is built to win.
- Technical SEO on a platform Google already favors for speed and structure.

Paid Ads — Google Shopping + Meta

- Product-feed Shopping ads pull straight from your live catalog and put your wheels in front of ready-to-buy searchers.
- Facebook & Instagram campaigns that retarget visitors and reach lookalike buyers.
- Spend pointed at fitment-correct landing pages, so clicks meet pages that close.

Social Media Management

- A consistent content calendar — build features, fresh arrivals, before/after, and reels that show the work.
- Channel management across Instagram, Facebook, and TikTok to build a local following that buys.
- Content that doubles as ad creative, so social and paid reinforce each other.

Build it once. Keep it running.

A straightforward, two-part engagement: a one-time build to stand up your store, then a maintenance retainer to keep it fast, current, and growing.

ONE-TIME

The Build

- Full storefront set up and branded for your shop
- Catalog wired to your stock + distributor drop-ship feed
- Vehicle fitment engine + customer garage live
- Payments, checkout, accounts, and order emails configured
- Launch-ready with your real catalog populated
- A platform you own outright

ONGOING

The Retainer

- Hosting, monitoring, security, and updates
- Automatic catalog & fitment data kept current
- Support and small enhancements as you grow
- Digital marketing — SEO, paid ads, and social
- Performance reporting and ongoing optimization

Let's get your shop selling wheels online.
